

# e-manager

Central e-pos Estate Control

Data Synchronisation

Management Facilities

Flexible Integration

Load Spreading

Small Footprint

## Retail Systems Designed by Retailers

Eurostop's **e-manager** is the latest addition to our suite of software applications. Already in use internationally, **e-manager** enables larger retailers to harness Eurostop's **e-pos touch** solution and integrate with ERP systems like Oracle, SAP, Movex and MS Dynamics AX. The **e-manager** browser based control panel provides access to your whole **e-pos** estate via a central dashboard - allowing at a glance monitoring of the online status of your **e-pos** estate, data synchronisation schedules and much more.

Simple configuration allows larger retailers to set up multiple e-manager groups based upon their regional architecture, assisting with load spreading, system resilience and efficient communication. With the small footprint generated by the software, synchronisation of data from head office to stores is carried out even over low band widths.

**e-manager** allows for centralised control of **e-pos** user security and head office can also set up and manage payment types, CRM criteria, discount/price override/petty cash/refund reasons, currency management and much more.

To access an additional host of features, use in conjunction with **e-rmis**, and you will also be offered on-line functionality such as live sales & stock, transfers, deliveries, CRM (customer loyalty management), promotions and product image upload.
